Ok, so what are the options in the open source world for a platform that can do BI? The 4 products that are top of mind for me are: - Talend Open Studio (OEM) - Netezza - RapidMiner - Cloudera Impala There are some others out there that are just beginning to emerge but they are not gaining any traction so I won't list them here. I have not used any of these products, so please excuse me if I am off target here. I am most familiar with the Open Studio product. It seems to be the most robust for most people. I have only used it on Windows, not sure about Linux or Mac. It seems to have the best performance for a budget machine. I think the customer base is much larger than the other products so it has the larger body of support. I am no expert on the products, but maybe I can list the pros and cons of each? In no particular order, they are: Talend Pros: Great performance for entry-level or low-end machines. Great job tracking and easy to customize. Works well on windows, mac, or linux. Can do full lifecycle with no time-consuming learning curve Cons: Does not support any real-time processing. It is much more 81e310abbf
