While it is certainly possible to utilize gravity as a driving force to permit the substance to flow proximally in the respiratory tract, this is often inconvenient and can often require excessive use of the patient's respiratory apparatus such as air bladders or other breath-powered mechanical devices. An alternative method of accomplishing the introduction of a substance proximally in the respiratory tract and removal of the substance from the lungs is through the use of a suction catheter inserted into the trachea and bronchi. This is often necessary, for example, in the treatment of a lung disease such as asthma, where large quantities of mucus must be removed from the patient's lungs. Suction catheters are known in the art, and several of these are shown in the following U.S. Patents, none of which are admitted to be prior art to the present invention: U.S. Pat. A: Microsoft's website has a key generator you can use for free as well: A word of warning: don't use the one for Microsoft Windows XP Professional! It is not compatible with XP Professional, and may cause serious problems. In addition, the support on the site for other versions of Windows (such as Windows Vista) may not be up to date. I would recommend installing Windows Vista or Windows 7, as a Windows XP user, and then registering on the site using a fresh Windows 7 or Vista key. Then, uninstall all of the remaining versions of Windows that you have on your system, and use the key to register your copy of Autodesk.
