A: LOL. You have it. You already cracked, now. Just don't install any programs. Just look through your current software and locate Nix-like files. Then go on with your business. As soon as you install your cracked software, you are put in the arms of the law.

Q: Coordinate Transformation between Cartesian and Frenet-Serret I am dealing with problems on curved coordinates and transformations. The transformation between cartesian and Frenet-Serret formulae is easy to understand and is formulated as

$$\begin{aligned} x'(s) &= x(s)\cos(\phi(s)) - y(s)\sin(\phi(s)) \\ y'(s) &= x(s)\sin(\phi(s)) + y(s)\cos(\phi(s)) \end{aligned}$$

when we have a curve $x(s) = x_0 + sx_1 + \dots, y(s) = y_0 + sy_1 + \dots$. The variables are related as $s = r\sin(\theta)$ $\phi = \theta + \omega$ x_0, x_1, y_0, y_1 are the initial values. Does anyone have any references for this, or a link where I can read about this on a practical level.

Thanks, Rey A: A concise reference is provided in "Fundamental Techniques of Mathematical Modeling" by Ronald F. Carrier (McGraw Hill, 1990). : 1 , i : 2 , x : 1 , t : 2 , e : 1 } . W h a t i s p r o b o f s e q u e
